HASSAS TARIM TEKNOLOJİLERİ

Speed Independent Spraying

Automatically rates the desired dose.
Provides application independent of tractor speed by using speed data received from satellite.

Wireless Communication

Thanks to its ability to generate its own energy, the entire system is mounted on the pulverizer. In this way, there is not even a single cable connection between the tractor and the sprayer. This provides incredible convenience to our farmers. It does not create an extra assembly burden for machine.

Nozzle Type Option

It provides correct pressure and homogeneous spraying thanks to the nozzle type options that comply with ISO standards registered in the system software.

Automatic Spraying Control

Spraying starts when the tractor moves, and stops automatically when it stops.

Start
Stop

Product Quality

The world's most reliable and stable valve set is used in the system.

Technical and Support

Provides easy use thanks to remote support and training videos.

Garden Spraying

Ability to spray with a fixed dose using a gun system.

R&D

This system was developed by farmers; their needs were determined and solutions were produced.
